# Sanitary fittings

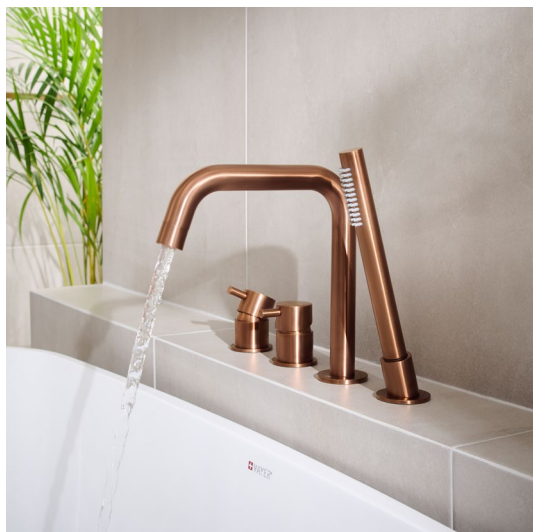

The collection of Moza mixers is a design hit of recent years. It stands out not only with exceptional aesthetics but also innovative solutions that improve comfort of everyday use. One of the key assets of the Moza collection are economic aerators **allowing to reduce water consumption even by 50%**. This is an excellent solution for those who approach eco-friendliness and economy consciously. The collection has been complemented by two new colours – white matt and gun metal, which bring a modern accent to interiors.

**Moza mini, so a compact version of the cult Moza collection, created with smaller washbasins and minimalist bathroom arrangements in mind.**

A subtle form of the mixer does not dominate the space but complements it harmoniously. The collection covers two mixer variants – classic, upright and countertop. Each one comes in 6 colour versions. Moza mini has been fitted with aerators which **reduce water consumption even up to 50%** compared with convenient mixers, which provides real savings whilst caring for the environment.

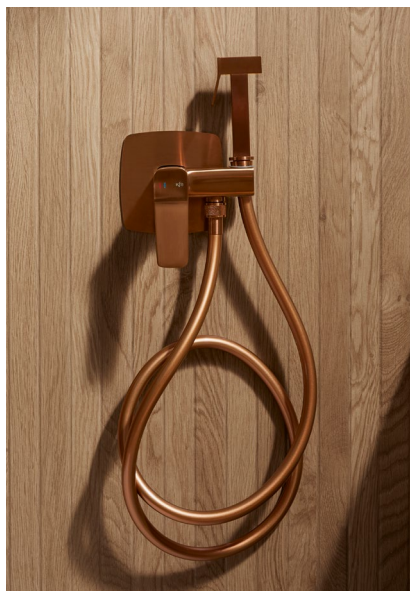

**Malaga combines beauty and care for the environment. A distinctive form with straight lines and subtle bends gives the mixer a minimalist character, being an excellent complementation of contemporary bathrooms.** Dominating curves of rectangular shapes reappear consistently in all elements of each model. Available in 6 colours: from classic chrome through brushed gold and copper shades to matt white and black. Coatings are durable thanks to PVD technology and electroplating, while the use of economic aerators **reduces water consumption even by several dozens of percent.**

# Logon

**Logon collection stands out with distinctive, geometric forms.** Clearly defined handles give mixers a strong character, matching modern bathrooms perfectly. A wide colour scheme allows to highlight the style of both austere, loft interiors, and ones where white and natural wood are dominant. **Neoperl SLC Rub Clean aerator used in washbasin models reduces water flow to 6L/min**, while additionally facilitates keeping the mixer clean

Duero Pure kitchen mixer includes two separate channels: for filtered and unfiltered water, which ensures that these are not mixed together. A filter, installed under the sink, purifies the flowing water, supplying it straight “into a glass”.

In Duero Pure mixer, **2 types of water filtering function start are available** – buttons mounted on front of the spout, or a switch integrated with the mixer’s handle.

Apart from filtering function, Duero Pure mixer is a fully functional kitchen mixer with rotary, pull-out spout and possibility to switch water stream type.

# Why should you drink filtered water?

## It's comfortable

With different types of filters, you can adjust the water to your needs and you don't have to remember to buy bottled water or carry it home from the shop.

## Economy

Filtering water at home is much more economical than buying bottled water on a regular basis.

## It's healthy

Filters remove various types of impurities and harmful substances from water, so you can be sure that the water you drink is healthy.

## Ecology

By filtering water at home, you can reduce the amount of plastic packaging used – by up to several hundred kilograms per year.
